Media Release Monday 6th August 2018
dClinic Launches Token Sale Targeting
Healthcare, Wellness and Vitality Facilities
in Indonesia

Dr. Richard Satur
CEO

As the Founder and CEO of dClinic, I am proud to announce that dClinic has now launched its token sale initially targeting Private Investors. Pre-sales and crowd-sales will start at the end of August 2018 via www.dClinic.io.

dClinic and VLM have agreed to become long term strategic partners with the aim of establishing advanced health, wellness and vitality services across Indonesia. These Vitality Facilities, both clinics and hospitals, are designed to address the accelerating “widening gap” in healthcare service provision as a function of the growth of healthcare service demand.

So Why Choose Indonesia as dClinic’s Launchpad :

With a population of over 275 million and ageing demographics, Indonesia is a relevant target market for dClinic. A large percentage of the population with a medium to high disposable income are looking for customized solutions in healthcare and wellness sector. The government policies are aligned to facilitate the ageing population through measures like Universal Health Insurance. State institutions and private companies are working in tandem to trigger further growth in the healthcare segment.

Indonesia is a popular tourist destination and an emerging market for medical tourism. Vital Life Management has undertaken extensive research and planning on seven (7) initial high priority projects in Jakarta and Bali and these projects are ready to commence. Equally, dClinic is the next generation Digital Clinic platform developed by a Healthcare Software and Platform provider with extensive experience in creating patient centric care solutions. The dClinic “advanced blockchain enabled digital technology platform” will be customised for Indonesia to support the full paradigm of health, wellness and vitality services to be offered through the initial 7 priority projects.

Clinical Trial Centre to be early adopter of the dClinic Platform :

In August 2018, VLM will establish its first Clinical Trial Centre that will be marketed nationally and internationally, with 100 Indonesian hospitals to be selected to participate in Clinical Trials. The Clinical Trials Centre and Central Laboratory will be located in the Lestari Hospital in Jakarta.

With a world market of \$USD 60 billion, Indonesia is ideally suited for connecting to world clinical trials. New drug and medical device development will be at our fingertips. It is anticipated that the partnership will conduct 10 local trials per year and 2 international trials of each 500 patients, 10 analyses of BE/BA, central lab analyses.

Clinical Trial Services will be delivered through the dClinic Health Platform which is focused around a “patient centred care” model. The Clinical Trials initiative will be one of the first VLM Projects to utilise dClinic’s “client centred care” data collection and advanced “clinical data analytics”.

Great Investment Opportunity for Indonesian Corporations :

The dClinic token sale offering (see at www.dclinic.io) provides Indonesian Institutional and Private Investors an opportunity to get on board early and be part of the revolution in Healthcare that is taking place now in Indonesia. There is an opportunity for Indonesian investors to purchase dClinic Health Coin (DHC) tokens at discounted entry level pricing that are likely to increase in value with being part of an token sale that has both physical assets (vitality centres and hospitals) and a world defining “ Advanced Blockchain Driven Digital Technology Platform,”

The overarching aim of both will be to improve population health outcomes and to set new health care provisioning standards, achieving “a new paradigm” for health care service delivery across Indonesia, while maximising financial return on investment (ROI) for all investors.
